SUMMARY

I recently completed my Bachelor's degree in Computer Science and have a strong passion for building modern, user-focused web applications. I work with React and Next.js to deliver fast, scalable and efficient front-end experiences. And for backend, I use FastAPI, and I also have experience with Node.js, Express.js, and NestJS. Currently, I'm exploring AI and LLMs with a focus on applying them in practical scenarios.

PROFESSIONAL EXPERIENCE

Frontend Developer

WOW Finstack Nepal 

05/2025 – 05/2026

Pokhara, Nepal

- Maintained and enhanced the **Core Banking System (CBS)** codebase - the backbone of all bank operations; ensuring successful implementation of critical functions like role assignments, balance updates, and user management.
- Actively contributed to building intuitive and responsive **Internet Banking (iBank)** features using React, including Remittance, Interbank and Intrabank Transfers, Top-up, and Ravkav. Also implemented RAG-powered guidance to help users navigate and achieve desired functionalities, and an AI-driven summarization feature.
- Developed the **Card Management System (CMS)** from scratch, implementing functionalities for all card-related activities including assigning cards, changing status, setting fees, setting limits, and more using Next.js.

EDUCATION

BSc. CSIT

Prithvi Narayan Campus

03/2022 – 05/2026

Pokhara-1, Bagar

SKILLS

- React.js, Next.js
- FastAPI, Node.js, Express.js, NestJS
- PostgreSQL, MongoDB
- LLMs, Web3

PROJECTS

Job Portal

Job Portal is a web app built with React, FastAPI, and Celery with role-based authentication (Candidate, Employer, Admin) implemented using CASL in frontend, async task processing, CV parsing, embedding-based candidate-job matching, and HMAC signature validation for secure APIs.

SmartFarm 360

Smart Farm 360 is a smart farming platform built with Next.js and NestJS featuring crop recommendation based on soil and weather data, fertilizer recommendation, disease prediction, and farm inventory management. (College Project)

AI Platform

AI Platform is a full-stack AI web app built using React.js and FastAPI with three tools: a JWT-authenticated Flight AI with LLM tool-calling and search history, an Argumentative AI for real-time streaming debates, and a Brochure Maker that generates downloadable marketing content from the website URL.

CERTIFICATES

AWS Academy Graduate
Introduction to Cloud Semester 1

AWARDS

1st Place - Running Shield IT Quiz Competition (2023 & 2024)
CSITAN- Pokhara
